Improvements/Bug Fixes

Freshdesk: Update addin so that default option is to use API key for authorisation
Freshdesk: Option to only cache contacts with a verified state.
GoldMine: Add support for Call Activity logging
Goldmine: SQL set as default connection method
Microsoft Dynamics 365 CRM: Migrate from ADAL to MSAL for authentication

SharePoint Lists: Use MSAL.NET and rewrite internal service client code

Syneton/AdminIS: Change configuration of addin to allow configuration of Host

Faster Forward: Add 'Import XML' option to Configuration

Hubspot: Endpoint updated

Exact Synergy Enterprise: Fix for SQL Client connection

Orthomatic: Fixed issue with phone numbers stored as just trunk-number (i.e. 0614555887)

MS Dynamics 365: Update addin to work with 'Government'

Exact Online - Adjusted timings for refreshing tokens using API

Fix Act! addin for environments where custom field mapping is not being used

Support for Act! v24 (64-bit)

ODBC: Improve data preview in Configuration

in2crm: Caching option removed

Carerix: Support searching for internationally formatted national numbers

iConnect - For caching purposes, integration now only requests authorisation token at the beginning, and then only if the token fails will it re-request it

crmSeries: Improved error messages

Outlook: Update to Redemption v6.1 to support Microsoft Store edition of Outlook

Shopify - Update addin to use new auth method and new API version (2022-04)

rev.io - Fix Show Contact Issue

Acumatica: Add option to pop Account instead of Customer

Insightly CRM: Option to set which pop URL format is used

HubSpot - Update Addin to use Private App Tokens
