

Quick Starter Guide

AppBar mode (Windows client)

Introduction

This guide contains useful information to help you get started with the Go Integrator Nava Windows client.

Licensing

Go Integrator Nava must be licensed before it can be used. User licenses are either assigned in advance by your provider or registered by the user at first login using a provider supplied License Key code.

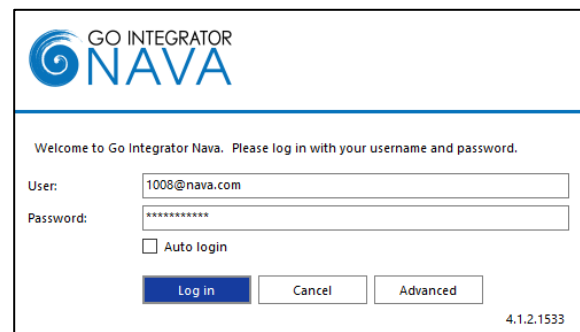

Shortcut

After installation Go Integrator Nava will request an “Access Code” which is provided by your service provider to set default parameters and only needs to be entered once. After successful access code entry, Go Integrator Nava is available from the start menu shortcut:

User Login

Go Integrator Nava requires User credentials to connect to the telephony platform. User credentials can be confirmed each time the client is started or can Auto login to bypass this step.

Interfaces

Nava has four main user interfaces: Tray Menu, AppBar, Call Toolbar and Preview Window. The Tray Menu and AppBar provide similar functions - choose your preferred mode through “interface” settings. Tray Menu mode is the default setting. The Call Toolbar and Preview Window operate the same way in either mode.

This guide explains the AppBar mode – for Tray Menu mode, please refer to the separate Tray Menu guide.

AppBar

In AppBar mode, the menu is always visible and docks to either the left or right edge of the primary desktop. It is interactive and expands according to the feature selected. The expanded window can also be pinned to remain permanently visible.

Your personal status icon is shown at the top of the AppBar and changes according to your extension state or Microsoft Teams Availability, if enabled.

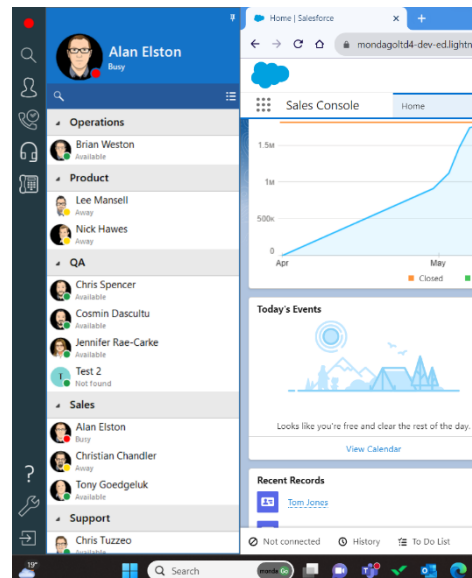

The following functions are launched from the AppBar: Presence, Search, Calls, Make Call (including Preferred Device), Call Toolbar, Call Center (if enabled), Configuration, Help and Exit.

Preview Window

The Preview Window is displayed whenever an inbound or outbound call is active and automatically hides after the call has connected (the hide delay time of the Preview Window can be altered in Configuration).

It can be re-displayed at any time during the call by hovering over the Nava AppBar status icon.

Context-sensitive call handling buttons are presented along the bottom of the Preview Window. Display information includes caller/called party details, which are retrieved from the system directory or any integrated CRM business applications.

CALLER DETAILS are retrieved from your CRM address books. Regional location can also be displayed.

NOTES are also retrieved from the caller's contact record, if available.

ADD CONTACT records to your CRM address books or copy data from one CRM to another.

POP CONTACT in the CRM application for further details

CREATE CALL LOG into the CRM contact record to show conversation history. Can also be automated.

CALL CONTROL

SEND CALLBACK EMAIL with caller details included

DISPLAY ADDITIONAL information from other CRM data

Call Controls

The following call controls are available through the Preview Window and Call Toolbar:

| | | |
|--|-------------------|---|
| | Answer | When a call is ringing, you can choose to answer the call by clicking the "Answer" button or deflecting it (transfer it without answering it) to another extension |
| | Deflect | |
| | Hang Up / Decline | End the current call / Decline the current incoming call (Softphone only) |
| | Hold | Pause the call - the caller will hear hold music if available |
| | Consult | Place the current call on hold and transfer the call to another extension |
| | Transfer | Blind transfer to another extension without introduction |
| | Callback Email | Open email client to send email with connected call details included automatically |
| | Contact | Contact details, retrieved from the telephone system directory |
| | Add Contact | Add the caller to the shared address book or integrated CRM business application/s |
| | Contact | Contact details, retrieved from an integrated CRM directory – the icon relates to the specific CRM and contact type retrieved |
| | Contact Options | Select from available actions: - Show Contact: open the full contact details within the integrated address book - Create and Show Call Task: write a call log entry into the integrated CRM and open ready for further editing - Show related data: Display additional information from other integrated CRM contact and activity data |

The Call Control functionality is dependent on the preferred device selection. The call controls displayed in the Preview Window will be driven by the Preferred device selected – see table in “Make Calls” section below.

Preview Window Stacking

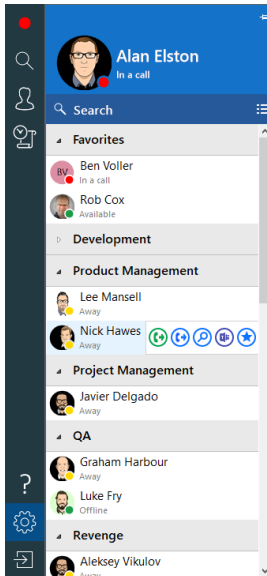

If there is more than one active call, the Preview Windows for those calls are automatically stacked to reduce the overall size of the display. Clicking on the header of any window will bring it to the front.

Presence

The Presence window displays co-worker's live extension status, which is blended with Microsoft Teams Availability, if enabled.

Launch icon:

Key features available from Presence include:

- Call co-workers or transfer call
- Show co-worker details
- Open Microsoft Teams chat
- Send Callback Email
- Add to Favorites

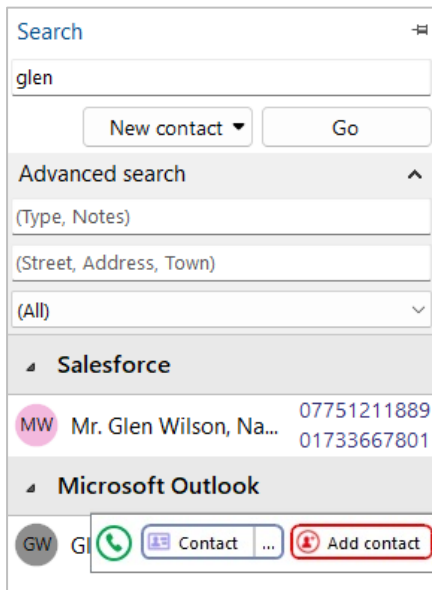

The Presence window will automatically populate with co-workers, sorted by department. The contact list can be arranged by location if preferred, or as a single list of contacts arranged by name or number as required.

A personalized Favorites group can be created by searching for a co-worker and selecting the star symbol in the slide out menu that appears when hovering over the contact.

Calls can be initiated or quickly transferred to co-workers with the slide out menu when hovering on a contact.

Search

Nava can search Microsoft Outlook, Google Contacts and telephone system shared or personal directories, plus any integrated CRM business applications, depending on the Nava user license level.

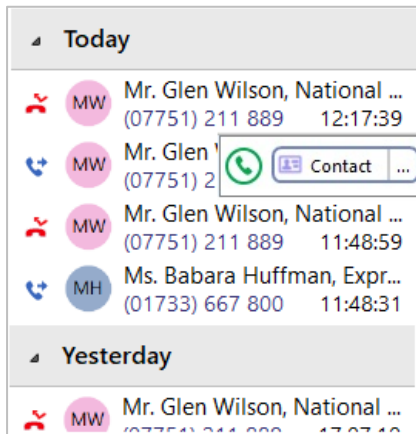

To dial the required contact, simply click on the telephone number displayed to initiate the call, or use the **Call** button from the slide out menu:

During a connected call, the slide out menu will also offer call transfer options so calls can also be quickly transferred to contacts found through the search.

Alternatively, the contact details can be opened via the slide out menu when hovering over the contact. Click the icon to view the available actions for the integrated application (example shown for Salesforce).

For any compatible CRM configured, the New Contact selection will also allow creation of new contacts directly into the CRM address book.

Call History

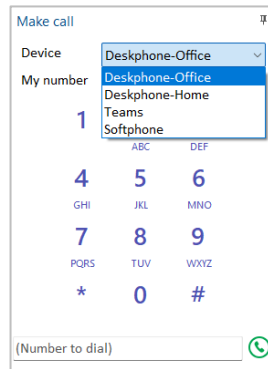

The Calls window displays a detailed call history including recent inbound, outbound and importantly, missed calls, ensuring a clear notification to avoid missing opportunities. Just click the telephone number displayed or the Phone icon to initiate the call.

For known contacts, the contact details can be opened via the slide out menu when hovering over the contact. Click the icon to view the available actions for the integrated application (example shown for Salesforce).

Make Call

To make a call using the built in Dialpad, click the Make Call icon, simply enter the Number to Dial and hit **Enter** or click the **Call** button:

Where multiple devices are available, the drop-down list allows you to choose your **Preferred Device** for call handling.

Note: the ability to answer a call through Cara is dependent on the device type selected – for example MS Teams calls cannot be answered by Nava.

Preferred Device Call Control:

| | Answer | Deflect | Decline | Hold | Consult transfer | Blind transfer | Hang up |
|------------------------------|--------|---------|---------|------|------------------|----------------|---------|
| Deskphone (Primary) | ✓ | ✓ | ✗ | ✓ | ✓ | ✓ | ✓ |
| Nava Softphone | ✓ | ✗ | ✓ | ✓ | ✓ | ✓ | ✓ |
| Deskphone (Secondary) | ✗ | ✓ | ✗ | ✓ | ✓ | ✓ | ✓ |
| SNAPMobile client | ✗ | ✓ | ✗ | ✗ | ✗ | ✓ | ✓ |
| Teams | ✗ | ✗ | ✗ | ✗ | ✗ | ✗ | ✗ |

Call Toolbar

The Call Toolbar can be docked to either the top or bottom of the screen and provides many core features including caller display, call handling buttons and, if enabled, Call Center Agent features.

Call Controls available via the Call Toolbar are identical to the Preview Window (see table above).

Additional Features

Missed Call Notification

A pop-up window can appear following a missed incoming call, providing a quick call-back method to avoid missing opportunities. The notification will stay visible until an action is taken.

Add Contact

When a telephone number is presented in the Preview Window or Call History and a contact cannot be found, the **Add Contact** icon is presented:

Click the icon to add contact information and then save to the desired directory or integrated CRM business application. The Add Contact feature can also be used to copy the contact to other locations.

Dialing Options

Nava offers a wide range of Click-to-Dial features to accelerate the outbound calling process, both in locating the number to dial and in the actual dialing process itself. The most common dialing tools are described here:

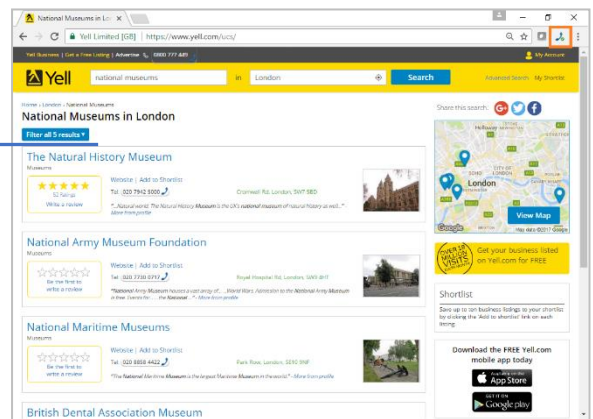

Clipboard Dialing

Any telephone number copied into the Windows clipboard can be dialed via an automatic pop window, offering the option to dial the number. Just click the Call icon to dial.

Web Page Dialing

Nava can recognize telephone numbers in web pages and convert them to a quick dial hyperlink. Simply click-to-dial directly from the web page.

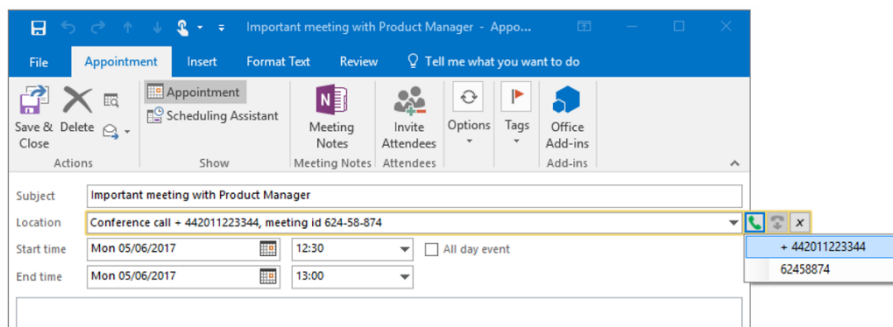

Screen Read Dialing

With "Screen Read" dialing, you can click-to-dial any number on screen, even when presented as an image. Just hover the cursor over the number displayed and hold 'ctrl' and 'shift' simultaneously to turn the number into a quick dial link:

Focus Dialing

With Focus dialing enabled, Nava can automatically detect telephone number fields within other windows applications to present a click-to-dial icon to the right of the field. If the field contains more than one telephone number, a drop-down is displayed when you hover over the icon, allowing you to select which number to dial.
